for the  
love  
of horses

## Arthro-Plus

### Special features of Arthro-Plus:

- ✓ Supports the joints, cartilage, tendons and ligaments during phases of high activity (e.g. during the event season, increased training, breaking in)
- ✓ the effective combination of hyaluronic acid, glucosamine and chondroitin sulfate has proven to work for sensitive and/or biased horses
- ✓ enriched with micro nutrients for the ideal and quick impact
- ✓ developed by experts and tested and proven in the real-world
- ✓ doping-free according to the FN (ADMR January 2013)

### The new, doping-free generation of a proven combination of nutrients which supports the joints, cartilage, tendons and ligaments

#### Ideally suited:

- ✓ As an extensive support with joint-nutrients
- ✓ Twice per year as a preventive support for joints, cartilage, tendons and ligaments
- ✓ For sport horses with sensitive musculoskeletal-systems

The use of special nutrients has proven to strengthen and support the joints and connective tissue. Important to mention is glycosaminoglycan (GAG) which belongs to the main components of the joint cartilage. Among other things glucosamine, chondroitin and hyaluronic acid belong to this natural group of glycosaminoglycan. Scientific studies (McIlwraith, 2004; Neil et al., 2005; Forsyth et al., 2006; Bergin et al. 2006) have shown that adding these pure substances via the feed can lead to an increase in production of these substances in the joint and an improved mobility. Unfortunately horses nowadays often show significant nutrition-related deficits, especially of micro-nutrients and "cartilage-nutrients". These, next to overstraining and positional errors, can lead to a negative impact on the joints. Especially for sport horses, old horses or previously affected horses an addition of chosen nutrients via the nutrition can be very effective.

LEXA Arthro-Plus is an additive with highly-effective nutrients that support joints, cartilage, tendons and ligaments during phases of intensive strain or individual vulnerability. The reliable effect of Arthro-Plus achieved through a special combination of highly dosed hyaluronic acid, glucosamine and chondroitin sulfate that were specifically enriched with trace elements and vitamins. This is of great importance due to the fact that these substances can only reach their desired positive effect in the horse's body in

combination with so-called co-factors. This is one reason why this specific combination of joint nutrients with phytonutrients and micro-nutrients is often a quicker and more reliable support than a single additive with individual substances. LEXA Arthro-Plus supplies an ideal combination of the above mentioned nutrients which were designed by our nutrition specialists and proven in practice. LEXA Arthro-Plus is doping-free and therefore an ideal support of the musculoskeletal system and the motivation of sport horses.

#### Feeding recommendations:

Large horses: 40g per day

Ponys and small horses: 15 – 30g per day

Suitable for a constant supplementary feeding. In the advanced stage the dosage can be increased up to 60g per day (large horses)

## Arthro-Plus

### Composition

Lucerne meal, glucosamine, chondroitin sulfate, sugar beet molasses, wheat bran, linseed oil, whey powder, vegetable fat (palm), dried molasses, hyaluronic acid

### Analytical components

Crude protein	7,3 %
Crude oil & fat	5,2 %
Crude fibre	10,2 %
Crude ash	5,3 %

### Additives per kg

Vitamin E as Alpha-tocopherol acetate	12.500 mg
Vitamin C as L(+)-ascorbic acid – Pure substance	25.000 mg
Zinc as glycine zinc chelate, hydrate	2.500 mg
Manganese as glycine-manganese chelate, hydrate	1.875 mg
Selenium as sodium selenite	8 mg
Lecithin	22.500 mg

### 1 kg Arthro-Plus contains:

- 188 g Glucosamine
- 113 g Chondroitin sulfate
- 3000 mg Hyaluronic acid

### Ideally suited:

- ✓ As an extensive support with joint-nutrients
- ✓ Twice per year as a preventive support for joints, cartilage, tendons and ligaments
- ✓ For sport horses with sensitive musculoskeletal-systems
