Derma-Protect-Öl

Special features of Derma-Protect-Öl:

- ✓ A valuable combination of following oils which are rich in omega-3: linseed oil, hempseed oil, black currant seed oil, grape seed oil, borage oil, black cumin oil and argan oil
- ✓ Rich in polyunsaturated fatty acids which can have a positive effect on skin- and coat problems (also allergies)
- ✓ Supports the entire skin metabolism and overall well-being
- ✓ Can make the change of coat easier and lead to a healthy and shiny coat
- ✓ Is also suitable for external application on affected skin

A highly effective combination of special vegetable oils for intact skin and a nice coat.

Ideally suited:

- ✓ As a supplement with essential fatty acids for horse's with coat- and skin problems
- ✓ For external use on sensitive skin

Fatty acids, which cannot be produced by the body are called essential fatty acids. From all essential acids especially the polyunsaturated fatty acids omega-3 (linolenic acid) and omega-6 (linoleic acid) are of greatest importance for the entire vitality. These fatty acids are not only important for the energy production but also complete very complex tasks for the production of cell membranes and as a raw material for eicosanoid (signalling molecules). These important substances are, among other things, involved in regulating the inflammatory processes. Especially when being affected of sensitive skin a supply of the anti-inflammatory fatty acid linolenic acid (omega-3) can be beneficial. With sensitivities or long-term problems of the skin a diet-related addition of special vegetable oils with a high percentage of valuable omega-3 fatty acids has proven to be effective.

What are the symptoms of a lack of essential fatty acids?

A lack of essential fatty acids can express itself through a rough and dry coat, thickening of the

skin, cracked skin, susceptibility for infections and fertility disorders.

Derma-Protect-Oil is a special combination of high-quality vegetable oils which are rich in the essential omega-3 fatty acid (linolenic acid) and also contain a high amount of the essential omega-6 fatty acid (linoleic acid). For an ideal relation of fatty acids the combination of linseed oil, hempseed oil, grape seed oil, borage oil, black cumin oil and argan oil create a perfect balance. Therefore Derma-Protect-Oil is rich in poly-essential fatty acids which have proven to have a harmonising effect on sensitive skin, can improve the overall skin- and coat problems and can make the change of coat easier for a nice and shiny coat. We deliberately forego the use of essential oils so that the nurturing aspects for the skin can also be helpful when used from the outside.

Feeding recommendations:

Large horses: 30 ml daily

Small horses, ponies: 15 – 20 ml daily
