

# LEXA® Horse Feed

for the  
love  
of horses

## Struktur Preciotic

### Special features of Struktur Prebiotic:

- ✓ For problems with the digestive system
- ✓ As a dietary support for the convalescence of the digestive system
- ✓ As an addition to the concentrate feed to support sensitive digestive systems
- ✓ As a diet-related support for the intestinal flora after a treatment with antibiotics
- ✓ As a replacement for concentrates for horses that cannot move due to an illness
- ✓ Lack of appetite
- ✓ To promote the regeneration
- ✓ When changing the feed

## Prebiotic structured muesli in premium quality for horses with sensitive intestines and for horses during phases of regeneration

### Ideally suited:

- ✓ For digestive problems
- ✓ As a diet-related support of the convalescence of the digestive system
- ✓ As an addition to concentrates to support sensitive digestive systems
- ✓ As a diet-related support of the intestinal flora development after a treatment with antibiotics
- ✓ As a replacement for concentrates for horses that cannot be moved due to injuries
- ✓ To feed during a lack of appetite
- ✓ To promote the regeneration
- ✓ When changing the feed

Disturbances in the intestinal system such as colic, diarrhoea, faecal water and faulty fermentation are often the result of nutritional deficits. Next to treating the causes and possibly necessary medicinal treatments a dietary support is also very helpful. As a dietary support Struktur Prebiotic supplies a natural composition of high quality components which regulate the digestion.

Struktur Prebiotic contains a high amount of natural substances to stabilise and regenerate the intestinal flora. Yeast which has been fermented can promote the production of cellulolytic bacteria in the large intestine. Therefore, for horses with problems with the microbial population in the large intestine, this effect can support the regeneration of the microbial colonisation which is important for the horse's digestion. A further positive effect is an improved nutrient intake from the provided feed.

To encourage a gentle and energetic stimulation of the colonic flora Struktur Prebiotic contains pectines from apple pomace and carrots. These natural components are combined with an effective amount of brewer's yeast and linseed expeller. Brewer's yeast is a natural bio regulator and often shows a supportive effect on digestive problems. It delivers high-quality amino acids, fatty acids, enzymes and b-vitamins. B-vitamins are vitamins that a healthy horse usually self-develops in the intestines through endogenous synthesis. During stress or digestive problems this self-production can be limited and can lead to deficits in the supply. In these cases an addition of b-vitamins is an important support for the digestion, metabolism and the entire vitality because the colon is an essential organ for the body's own defence system. Linseed expeller is a further effective component of Struktur Prebiotic. Next to

essential fatty acids linseed expeller delivers a high amount of mucilage which can support and nurture the intestinal mucosa.

Struktur Prebiotic contains chicories pulp as a natural source of pectin and inulin. Inulin is an oligosaccharide with a prebiotic effect.

This variety of natural and intestine-friendly ingredients is combined with the structure component Lucerne, oats and wheat middling to offer a horse with a sensitive digestive system a crib feed which is rich in nutrients and also tasty.

The composition of Struktur Prebiotic is rounded off through the addition of effective herbs such as yarrow, balm, sage, centaureum, watercress, sea buckthorn, aniseed and wormwood to support the digestion.

#### **Feeding recommendation:**

Ponies: 150g Struktur Prebiotic per 100kg body weight

Small and large horses: 200g Struktur Prebiotic per 100kg body weight.

Please divide the recommended amounts to at least 2 portions daily.

# LEXA<sup>®</sup> Horse Feed

for the love of horses

## Struktur Prebiotic

### Composition

Wheat middling, apple pomace, oats, maize germ, Lucerne cut, yeast, sugar beet molasses, soy extraction grist, Lucerne meal, linseed expeller meal, draff, rapeseed oil, calcareous marine algae, carrot cubes, linseed oil, carob, chicories pulp, mono calcium phosphate, yarrow, balm, sage, centaurium, watercress, sea buckthorn, aniseed and wormwood

### Analytical components

Crude protein	13,8 %	Potassium	1,1 %
Crude oil and fat	7,5 %	Lysine	0,6 %
Crude fibre	9,0 %	Methionine	0,2 %
Crude ash	7,4 %	Threonine	0,3 %
Calcium	1,2 %	Cysteine	0,2 %
Phosphorus	0,6 %	Energy (ME)	8,5 MJ/kg
Magnesium	0,5 %	Digestible energy	10,2 %
Sodium	0,1 %		

### Additives per kg

Vitamin E as alpha-tocopherol-acetate	200 mg
Vitamin C as L(+)-ascorbic acid – pure substance	16 mg
Choline chloride as choline chloride – pure substance	250 mg
L-carnitine as trimethylamine of amino-4-hydroxy-3-butyric acid	1.000 mg
Bentonite	100.000 mg

### Ideally suited:

- ✓ For digestive problems
  - ✓ As a diet-related support of the convalescence of the digestive system
  - ✓ As an addition to concentrates to support sensitive digestive systems
  - ✓ As a diet-related support of the intestinal flora development after a treatment with antibiotics
  - ✓ As a replacement for concentrates for horses that cannot be moved due to injuries
  - ✓ To feed during a lack of appetite
  - ✓ To promote the regeneration
- When changing the feed
