

LEXA[®] Horse Feed

for the
love
of horses

Vital Flocken Mix (Flakes)

Special features of Vital Flocken Mix:

- ✓ Highly digestible and available
- ✓ A pure combination of hydrothermally treated maize- and barley flakes (60% maize flakes and 38% barley flakes)
- ✓ Without molasses
- ✓ Without added minerals, vitamins and trace elements as a targeted supplement with mineral feed

High-quality combination of hydrothermally opened maize- and barley flakes rounded off with vegetable oils

Ideally suited:

- ✓ For all horses as an addition to high-quality grains

Next to oats maize and barley are the most digestible sorts of grain in the horse feeding. Maize has a high amount of energy and a low amount of protein and barley is used as a well-tryed grain due to the fact that sensitive horses develop less temperament with barley than with oats. Both grain flakes as untreated grains cannot be digested very well and can lead to severy problems in the intestinal system.

If one wants to use these well-tryed grain sorts in horse feed a hydrothermal treatment is the best solution to reach an optimal digestibility. Additionally a hydrothermal treatment eliminates 100% of germs and other hygienic problems so that an absolutely hygienic and harmless grain is available for the high dietary demands in horse feed. We have combined these two high-quality grains in the highest quality standard and rounded them off with vegetable oils.

Vital Flocken Mix does not contain any molasses or added vitamins, minerals and trace elements. Therefore it can be fed to sensitive horses. Vital Flocken Mix is also suited as a concentrate feed combined with our high-quality variety of LEXA mineral feeds and our premium-line from ATCOM Horse. When needed, Vital Flocken Mix can be added to the normal ration of LEXA mueslis to increase the amount of grains.

Feeding recommendations:

Depending on the workload as a sole concentrate or mixed with oats.

Vital Flocken Mix (Flakes)

Composition

Maize flakes (hydrothermally treated and ground), barley flakes (hydrothermally treated and ground), rapeseed oil

Analytical components

Crude protein	9,8 %	Potassium	0,4 %
Crude oil and fat	4,3 %	Energy (ME)	12,4 MJ/kg
Crude fibre	3,3 %	Digestible protein	7,4 %
Crude ash	1,8 %		
Calcium	0,3 %		
Phosphorus	0,3 %		
Magnesium	0,1 %		
Sodium	0,1 %		

Ideally suited:

For all horses as
an addition to
high-quality
grains
